A; Title: Genome of the Bacterium Streptococcus pneumoniae S
A; Reference number: A97872; MUID:21429245; PMID:11544234
A; Accession: G98099
A; Status: preliminary
A; Molecule type: DNA
A; Residues: 1-359 < KUR>
A; Cross-references: GB:AE007317; PIDN:AAL00628.1; PID:g1545
C; Genetics:
A; Gene: gapA
C; Superfamily: glyceraldehyde-3-phosphate dehydrogenase
C; Keywords: oxidoreductase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

C;Species: Clostridium pasteurianum
C;Species: 22-Nov-1993 #sequence_revision 10-Nov-1995 #text_change 03-Jun-2
C;Accession: S34254
R;Oster, T.; Assobhei, O.; Scherrer, S.; Branlant, G.; Branlant, C.
submitted to the EMBL Data Library, May 1993
A;Description: Nucleotide sequence of the glyceraldehyde-3-phosphate deh
A;Reference number: S34254
A;Accession: S34254
A;Molecule type: DNA
A;Residues: 1-334 <OST>
A;Coss-references: EMBL:X72219; NID:g311923; PIDN:CAA51020.1; PID:g3119
C;Superfamily: glyceraldehyde-3-phosphate dehydrogenase
C;Keywords: oxidoreductase

"Genome sequence of an M3 strain of Streptococcus pyogenes reveals a large-scale genomic rearrangement in invasive strains and new insight into phage evolution.";

Genome Res. 13:1042-1055(2003).

-!- FUNCTION: ALSO BINDS HUMAN PLASMINOGEN (By similarity).

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + Phosphate

NAD(+) = 3-phospho-D-glycerolylsis; first step.

-!- PATHWAY: Second phase of glycolysis; first step.

-!- SUBUNIT: Homotetramer (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        THIOL GROUP DURING CATALYSIS

"Cloning, sequencing and functional overexpression of the streptococcus equisimilis H46A gapC gene encoding a glyceraldehyde-3-phosphate dehydrogenase that also functions as plasmin(ogen)-binding protein. Purification and biochemical characterization of the protein.";

Eur. J. Biochem. 239:42-51(1996).

-!- FUNCTION: ALSO BINDS HUMAN PLASMINOGEN.

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate NAD(+) = 3-phospho-D-glyceraldehyde 3-phosphate + NADH.

-!- SUBGELLULAR LOCATION: Cytoplasmic.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.

"The complete genome sequence of the lactic acid bacterium Lilactis ssp. lactis IL1403.";
Genome Res. 11:731-753(2001).
-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosply NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.
-!- PATHWAY: Second phase of glycolysis; first step.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Length 337;

Reduence analysis of proteins from Clostridium pasteurianum W5.";

Electrophoresis 19:802-806(1998).

C -!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NADH.

C -!- PATHWAY: Second phase of glycolysis; first step.

C -!- PATHWAY: Second phase of glycolysis; first step.

C -!- SUBUNIT: Homotetramer (By similarity).

C -!- SUBCELLULAR LOCATION: Cytoplasmic.

C -!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate

dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gарв

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate NADH.

-!- PATHWAY: Second phase of glycolysis; first step.

-!- SUBUNIT: Homotetramer.

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                  VISGA

"Genome-based analysis of virulence genes in a non-biofilm-forming staphylococcus epidermidis strain (ATCC 12228).";

Mol. Microbiol. 49:1577-1593 (2003).

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NADH.

NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

-!- PATHWAY: Second phase of glycolysis; first step.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (GAPDH

Microbiology 144:905-914(1998).

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate

NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

-!- PATHWAY: Second phase of glycolysis; first step.

-!- SUBUNIT: Homotetramer (By similarity).

-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosp dehydrogenase family.

"Complete genome sequence of enterohemorrhagic Escherichia coli O157:H7 and genomic comparison with a laboratory strain K-12.";

DNA Res. B:11-22(2001).

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate + NADH.

-!- CATALYTIC ACTIVITY: D-glyceroyl phosphate + NADH.

-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

-!- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                            r., Tanaka M., Tobe T.,

Thibraries: evidence for a rat glyceraldehyde-3-phosphate

Thibraries: evidence for a rat glyceraldehyde-3-phosphate

Thibraries: evidence for a rat glyceraldehyde 3-phosphate

Thibraries: evidence for a rat glyceraldehyde 3-phosphate + DNA 5:427-435(1986).

L. CATALVIIC ACTIVITY: D-glyceraldehyde 3-phosphate + DATHWAY: Second phase of glycolysis; first step.

C. !- PATHWAY: Second phase of glycolysis; first step.

C. !- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

C. !- SUBCELLULAR LOCATION: Cytoplasmic (Potential).

C. !- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.

C. !- CAUTION: IN THE KI2 STRAIN THIS GENE IS DISRUPTED BY A STOP CC

-! - CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate

NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

-! - PATHWAY: Second phase of glycolysis; first step.

-! - SUBUNIT: Homotetramer.

-! - SUBCELLULAR LOCATION: Cytoplasmic.

-! - SUBCELLULAR LOCATION: Cytoplasmic.

-! - SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
dehydrogenase family.

"Two glyceraldehyde-3-phosphate dehydrogenases with opposite physiological roles in a nonphotosynthetic bacterium.";
J. Biol. Chem. 275:14031-14037(2000).

-!- FUNCTION: More active in catabolism.

-!- FUNCTION: More active in catabolism.

-!- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphane | NADH. |

-!- PATHWAY: Second phase of glycolysis; first step.

-!- SUBUNIT: Homotetramer.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SUBCELLULAR LOCATION: Cytoplasmic.

-!- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate dehydrogenase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     opposite
